Exhibit A

Origin and Breeding History of Lettuce variety, temporary designation, "3303".CHMPARRAL

1. "3303 originated from a hand pollinated cross between Merit 3186 and Calmar. Cross was made in 1965. Using Merit 3186 as the recurrent parent, 6 back crosses were made to downy mildew Race 5 resistant segregants. In each back cross generation, resistant segregants were identified by inoculation with the organism.

Subsequently, the F-1 of back cross 6 was inoculated with the organism to eliminate susceptible individuals (S-1). Then, the (S-1) was inoculated with the organism to eliminate the heterozygotes for resistance. The (S-2) was selfed and progeny tested for phenotype. On basis of progeny test, "3303" was chosen as the most suited for a variety fitting the same uses as Merit 3186, but carrying resistance to downy mildew Race 5.

- 2. In preparing for progeny testing of the S-3 generation, a portion of the seed of each lot was retained for foundation seed increase. In 1973 foundation seed was produced on "3303".
- 3. In 1974 and 1975, trials were conducted in the California coastal area and in the Phoenix area in Arizona where Merit 3186 is now utilized. In these trials it was shown that "2202" was equal to Calmar in resistance to downy mildew Race 5, but with the more desireable characteristics of Merit 3186.
- CHAPARRAL
 "3303" is homozygous for resistance to downy mildew Race 5 and shows no more diversity in morphological characteristics than found in the Great Lakes type of lettuce.
- 5. The genetic makeup of "3303" was stabilized in back cross 6, S-3 generation.

Exhibit B

Botanical Description of "3303".

CHAPARRAL
"3303" resembles Merit 3186 in all morphological characteristics. In
1975 trials, "3303" frame averaged 44 cm. across. Skirt leaves are semiprocumbent but large, rounded, with very waved margins. Wrappers are
numerous, large, erect and very frilled. Cap leaves are large and well
flagged with some spiraling. Butts are flat and well colored. Heads are
large, flattened in shape, average 18.75 cm. in diameter and 12.5 cm. in
depth. "3303" has coarse Great Lakes texture.
CHAPARRAL

Color of leaves as determined by spectral reflectance gives a Y value of 21.3, a purity of 33.3% with the dominant wave length at 568 nm. This is in the greenish yellow of the Maxwell Chart of chromaticity. For Merit 3186, Y value is 17.8; purity 40.7% with dominant wave length at 577 nm. From these measurements, "3303" has a brighter hue and contains more yellow pigment.
